City of Springfield, Oregon
Capacity, Management, Operations, & Maintenance (CMOM)
Program Video - Public Information & Education: Video winner

About the Project
Over the past several years, Springfield’s Development & Public Works (DPW) Department has implemented a Capacity, Management, Operations, and Maintenance program. CMOM is an asset management tool that guides sustainable, responsible stewardship of the wastewater collection system.

Though an essential service for public health and protection of the environment, wastewater services are often out of sight and mind for community members. In order to tell the story of the activities that make up the CMOM program and their importance, communications staff created the CMOM Program video. The video shows a day in the life of DPW Operations staff and invites community members to join the effort of extending the life of the wastewater collection system.
